

Pentwater Beachfront Restoration Project Update

This meeting will provide the community with an update on the Pentwater Beachfront Restoration Project, which is targeted to complete design this year while continuing to pursue grant funding. The project focuses on reducing sand movement into the channel by using native vegetation and redesigned public amenities. Additionally, it will improve accessibility by creating a smoother traffic turnaround for beach drop-offs, installing mobility-friendly walkways, and building a new universal playground with adaptive equipment for all users.

**Channel Lane Park
